

2. Evans (1997), Fig. 43, p. 99 (back face + left side). Describing this cell, he wrote (p. 100): 'I have also a larger specimen, 9/2 inches long, from the same spot, and found, I believe, at the same time. This is presumably no. 10687 with also reached Evans through J. Warren. These 2 cells are very similar in condition, color & raw material (especially in common presence of light band shown in Evans' engraving of 10686). It seems safe to treat them as an association.
