Comments 1. BM.386

2. the taxonomic groups of this association are reflected in the colour of the flint. 10-22 1 & 2 are stained a greeny beige on the ground surface, while 3-5 are all (including the ground surface of 5) bluey-grey. The distinction is difficult to interpret, however, as the colour of the scans on H2 are the same as cells 3-5, & all seem to be made out of the same flint, with large mottles. 1 & 2 have fresh apparently unused blade edges.
